

10 STEPS

to ensure your pool installation is a success.

1. Call us at 561-563-3420 for a design consultation and email us a copy of your pool/house survey at americanlandscapedesigns@gmail.com
2. Schedule an appointment with one of our designers so the process can begin.
Do not let the pool company take the dirt that they excavate from your pool. You will need it later.
3. Call us to locate and cap off all sprinkler lines in the pool/deck area. There is no charge for this complimentary service. We can also move any plants or trees in the area where the pool will be installed.
4. Install new sprinkler lines to the planter areas before the deck is installed.
5. Reroute all sprinkler lines around the new deck and new flowerbeds.
6. Select trees, shrubs, sod type, lighting options, and ground cover before the pool construction is finished so that we can finish our work at the same time your pool is done.
7. Pick out a pool design that you can live with and set aside a landscape budget for your post pool construction landscape renovation.
8. Make sure all plants and materials are not messy or destructive to your pool.
Mulch, ficus bushes, and messy trees should not be used near your pool.
9. Use lots of plants and hardscape, so that your landscape renovation will last as long as the pool.
10. Finally, relax and let the professionals at americanlandscapedesign.com complete your pool oasis.
We can help reduce some pool construction anxiety before they begin to dig.
